

# Stocker Corridor and Bike Path

The open space along Stocker Street is the future site of a mile-long linear trail and park project.

The Stocker Corridor is a critical open space connection linking the eastern end of the Baldwin Hills Conservancy's planning territory to Kenneth Hahn State Recreation Area (KHSRA). The Corridor stretches one-mile from Presidio Drive to the Five Points Intersection (Stocker Street, La Brea Avenue and Overhill Drive). Currently, pedestrians use the street along Stocker as an exercise route to and from KHSRA and its five-miles of existing trails. The 33-acre Trail and Park project will provide a safe and beautiful landscaped route to the larger park while enhancing neighborhood access and utility of the existing open space.

Partnering with the California State Parks Foundation, the Conservancy has co-funded a community planning and site design process to expand public access to local state park land. During the summer of 2004, a team of landscape architects, engineers, and graphic designers will work with surrounding communities to develop preliminary schematic plans and program improvements for the development of a linear park and trail. The specific project components will include:

- ◆ Pedestrian and bicycle trail system
- ◆ Parking and related infrastructure
- ◆ Passive recreation spaces (e.g., benches and rest areas)
- ◆ Interpretive and directional signage
- ◆ Potential bridge connection to KHSRA via Norman O. Houston Park

## Project Status:

Active

## Site Specifications:

33 acres

## Estimated Costs:

TBD

## Project Managers:

Baldwin Hills

Conservancy

California State Parks
